 *7 Applicable when AUX and remote control (optional) is added.
 * To meet the specifications. Do not operate over-loaded condition.
 * Sound noise may be generated by power supply in case of pulse load.
 * Parallel operation is not possible.
 * Forced air cooling is required to output up to MAX OUTPUT WATTAGE.
 * Bottom layer P.C.B has electric potential which is required isolation from FG by clearance or creepage as the safety design issue.

*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.
 Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM103).

*2 Drift is the change in DC output for an eight-hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

*3 Derating is required.

*4 Please contact us about dynamic load and input response.

*5 Please contact us about another class.

*6 Specification is changed at option, refer to Instruction Manual.

*7 When output current more than rated, output will shut down after 5 seconds or more. Recycle input after 3 minutes to reset the protection.

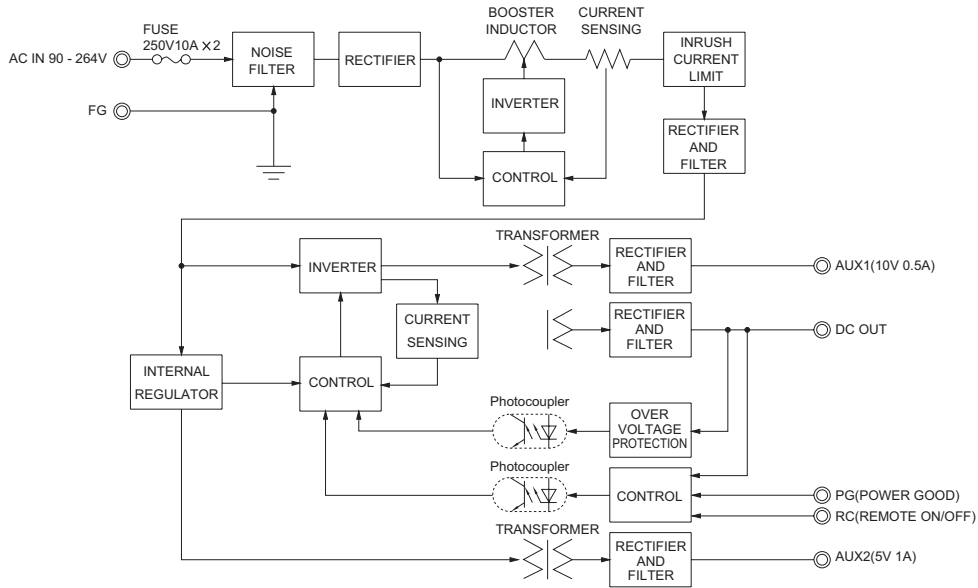

* To meet the specifications. Do not operate over-loaded condition.

* Sound noise may be generated by power supply in case of pulse load.
