#### **AC-DC Power Supplies Medical Type**

## Feature

For medical electric equipment Medical Isolation Grade 2MOPP 4kV isolation Suitable for BF application Low leakage current Economical design Class II

# Safety agency approvals

ANSI/AAMI ES60601-1, EN60601-1 3rd, C-UL (CAN/CSA-C22.2 No.60601-1), UL62368-1, EN62368-1, C-UL (CAN/CSA-C22.2 No.62368-1) Complies with IEC60335-1

# CE marking

Low Voltage Directive RoHS Directive

# UKCA marking

Electrical Equipment Safety Regulations RoHS Regulations

# 5-year warranty (Refer to Instruction Manual)

#### EMI

Complies with CISPR11-B, CISPR32-B, EN55011-B, EN55032-B, FCC Part 15-B, FCC Part 18-B

# **EMS Compliance**: EN61204-3, EN61000-6-2 IEC60601-1-2 (2014), EN60601-1-2 (2015)

EN61000-4-2

EN61000-4-3

EN61000-4-4

EN61000-4-5

EN61000-4-6

EN61000-4-8

EN61000-4-11

- Consult us about dynamic load and input response. Measure the output voltage by using the average mode of the tester to deal with the burst operation at low (lo=0~20%typ) load.
- This is the result of measurement of the testing board with capacitors of  $47 \mu F$  and  $0.1 \mu F$  placed at 150 mm from the output terminals by a 20MHz oscilloscope or a ripple-noise meter equivalent to Keisoku-GikenRM104.
  - When the load factor is low (lo=0~20%typ), the switching power loss is reduced by burst operation, which will cause ripple noise to go beyond the specifications.
- \*3 Output power derating is required. Refer to "Derating"
- \*4 Consult us about details.

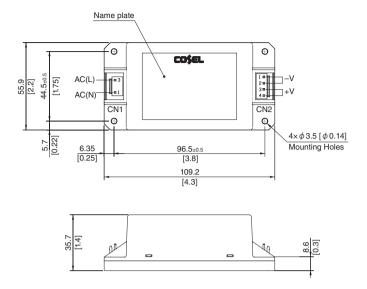

- \*5 The listed option may affect the published standard specifications. Please contact us for detailed product specifications and safety approvals.
- \*6 Please contact us about another class. When two or more units are operating it may not comply with the IEC61000-3-2. Please contact us for details.
- All parameters not specially mentioned are measured at ACIN 230V, rated load and 25°C
- of ambient temperature.

  Do not use the power supply in overcurrent conditions or in unspecified input voltage ranges. Otherwise the internal components may be damaged.
- Parallel operation is not possible with this model. Acoustic noise may be heard from the power supply when used for pulse load.

   Maximum current per contact at CN2 is 5A
- ※ Mounting torque: 0.49N⋅m max

## **Derating Curve**

\*The shaded area is the derating required at start-up.

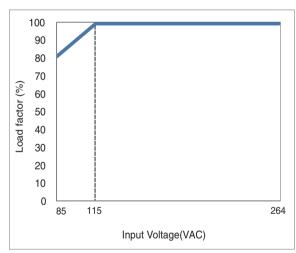

Fig.2 Derating curve depending on input voltage

■The ambient temperature should be measured 5 to 10 cm away from the power supply so that it won't be inluenced by the heat from the power supply. Please consult us for more details.

- Consult us about dynamic load and input response. Measure the output voltage by using the average mode of the tester to deal with the burst operation at low (lo=0~20%typ) load.
- This is the result of measurement of the testing board with capacitors of  $47 \mu F$  and  $0.1 \mu F$  placed at 150 mm from the output terminals by a 20MHz oscilloscope or a ripple-noise meter equivalent to Keisoku-GikenRM104.
  - When the load factor is low (lo=0~20%typ), the switching power loss is reduced by burst operation, which will cause ripple noise to go beyond the specifications.
- \*3 Output power derating is required. Refer to "Derating"
- \*4 Consult us about details.

- \*5 The listed option may affect the published standard specifications. Please contact us for detailed product specifications and safety approvals.
- \*6 Please contact us about another class. When two or more units are operating it may not comply with the IEC61000-3-2. Please contact us for details.
- All parameters not specially mentioned are measured at ACIN 230V, rated load and 25°C of ambient temperature.
- Do not use the power supply in overcurrent conditions or in unspecified input voltage ranges. Otherwise the internal components may be damaged.
- Parallel operation is not possible with this model.
- Acoustic noise may be heard from the power supply when used for pulse load.

- ※ Dimensions in mm, [] = inches
- \* Tolerance: ±1 [±0.04]
   \* Weight: 230g max

- Case material : PBT
   Maximum current per contact at CN2 is 5A
- ※ Mounting torque: 0.49N⋅m max

## **Derating Curve**

\*The shaded area is the derating required at start-up.

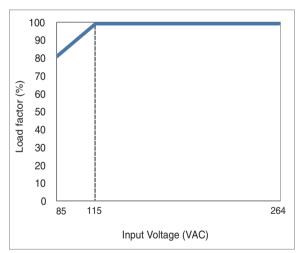

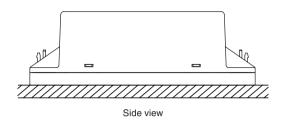

Fig.2 Derating curve depending on input voltage

■The ambient temperature should be measured 5 to 10 cm away from the power supply so that it won't be inluenced by the heat from the power supply. Please consult us for more details.

## **Assembling and Installation Method**

■When the power supply is used with natural convection cooling, the standard mounting position is horizontal.

■AC voltage exists on the primary side. Therefore, in order to prevent electric shock, or to meet the leakage current requirements of the safety standard, you need to secure an insulation distance of at least 5mm.

## **Instruction Manual**

■Please read the "Instruction Manual" and "Before using our product" before you use our product.
